## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Eguchi et al (EP 1 065 115).

Eguchi et al disclose all the limitations of the instant claims including: a plurality of solenoid valves **SV** that shut the brake hydraulic circuit; and a plurality of variable orifices **D** that variably reduce brake force of the wheel cylinders **WC** after the brake pedal is released, by utilizing a brake fluid flow to the master cylinder, wherein the solenoid valves and the variable orifices are connected to the brake hydraulic circuit in parallel, whereby changing the diameters of the variable orifices provides an adjustable delay in reducing the brake force the wheel cylinders. See figure 6, and paragraph [0104] which suggests a flow control valve for the restriction **D**. It is inherent to a flow control valve to have a varying orifice, as it is necessary for variation of fluid flow. Regarding the adjustable delay, Eguchi discloses that the restriction reduces the wheel cylinder pressure at a certain speed. It necessarily follows that the flow control valve (adjustable restriction) provides pressure reduction at an adjustable speed and therefore delay.

Regarding claim 2, Eguchi et al disclose relief valves **RV**.

Regarding claims 3-4, Eguchi et al disclose check valves **CV**.

### ***Response to Arguments***

Applicant's arguments filed 10/18/2004 have been fully considered but they are not persuasive.

Eguchi discloses that the restriction reduces the wheel cylinder pressure at a certain speed. It necessarily follows that the flow control valve (adjustable restriction) provides pressure reduction at an adjustable speed and therefore delay. It is maintained that the rejections are proper.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
